PROJECTS

1. Hospital Website

As part of my semester project, I undertook the development of a user-friendly website for a hospital. The primary objective was to create an online platform that allows patients to book appointments online. Additionally, the website provided administrative functionalities such as the ability to add, delete, and update doctors, as well as manage patient records.

Technologies:

HTML5, CSS3, JavaScript, and PHP.

2. Al-Sadad Bank (Clone)

I was hired for an online project to create a front-end clone of Al-Sadad Bank. My responsibility was to develop the user interface and design for the website. I utilized HTML5 and CSS3 as the primary technologies for this development task.
